

Project name = KolomFlow

I want to make a website, app for college student and working professional the webapp i use as

Feature

Dashboard : all details

Text to handwriting : here user can attach their txt, docx, pdf text file convert into human handwritten when pages are multiple then pdf pages are multiple

signature

Writing animator: here user can write txt and convert into video (yt, desktop , Instagram , tiktok)

Project builder: here user can build their project like frontpage index with topic like introduction problem statement and user can add their topic also

Scan and fix : here user can scan and fix their old photo and old handwritten pages clen and beautiful

PDF tools : here user can convert their files into pdf like docx , txt , jpg , ppt , excel into pdf

Ppt maker : her user can make their ppt

Cloud : here user can save their converted files save in cloud

Make a add page for addvertice our tools and some things here user can download our app

Ok here you use ai tools and api also free

Language:

Frontent react vite tailwind

Backend : node js , express js

Database: mongo db

Android capasitor

Login : user can use PDF tool without using login firstly open dashboard

Wallet : make a wallet page only pdf tools are free and all tools ares paid

Paymet use razorpay

Use credit system for payment 1 credit 1rs and you calculate all tasks credit prices

Ad: user view ads and earn 1 credit here I am earn money froms add like googles ad

Make a setting page

Make a profile page

Responsive for all device
Make a app using capasitor
